

FNP Sales Analysis Dashboard

Executive Summary & Business Insights

Project Focus: Sales performance, revenue trends, customer spending, product performance, order timing, occasions, and geographical demand.

1. Project Overview

The FNP Sales Analysis Dashboard is an interactive business intelligence project designed to analyze sales performance, revenue trends, customer spending behavior, order patterns, product performance, and geographical demand. The dashboard converts raw sales transactions into meaningful visual insights using key performance indicators (KPIs), charts, and interactive filters. It enables business stakeholders to understand where revenue is generated, which products and occasions perform best, when customers place orders, and which cities generate the highest number of orders.

2. Business Objective

- Measure total revenue and order volume.
- Understand average customer spending and delivery performance.
- Identify high-performing occasions and product categories.
- Determine peak order hours and high-revenue months.
- Identify top-performing products and cities.
- Support data-driven decisions for marketing, inventory, sales, and logistics.

3. Key Performance Indicators

KPI	Value	Business Meaning
Total Orders	1,000	Total orders analyzed
Total Revenue	■35,20,984	Overall revenue generated
Avg. Order-to-Delivery Time	5.53 days	Average delivery time
Avg. Customer Spend	■3,520.98	Average revenue per transaction/customer

4. Major Business Insights

A. Revenue by Occasion

Revenue is distributed across multiple gifting occasions. Anniversary and Raksha Bandhan are particularly strong contributors, while All Occasions, Holi, Birthday, Valentine's Day, and Diwali also contribute substantially.

Business Insight: FNP can use high-performing occasions for targeted marketing, personalized recommendations, seasonal campaigns, and occasion-specific promotions.

5. Revenue by Product Category

The category analysis shows considerable variation in revenue contribution. Colors, Sweets, Soft Toys, and Raksha Bandhan products are among the stronger contributors in the displayed dashboard.

Business Insight: High-performing categories can be prioritized during promotions, while complementary products can be bundled to increase order value.

6. Revenue by Order Hour

Revenue varies throughout the day, with strong activity particularly visible during the evening period. Peaks around approximately 18:00–20:00 indicate that customer purchasing behavior is concentrated during certain hours.

Business Insight: Promotional notifications, digital advertisements, customer support capacity, and limited-time offers can be aligned with peak purchasing hours.

7. Revenue by Month

Monthly revenue shows significant fluctuations, with visible peaks around February, March, August, and November. The strong August peak highlights the influence of seasonal and occasion-driven demand.

Business Insight: Historical monthly patterns can support demand forecasting, inventory preparation, staffing, and advance marketing campaigns.

8. Top 5 Products by Revenue

- **Magnum Set** – highest among the displayed Top 5.
- **Quia Gift**
- **Dolores Gift**
- **Harum Pack**
- **Deserunt Box**

Business Insight: These high-revenue products can receive greater visibility through homepage promotions, recommendations, cross-selling, occasion-based campaigns, and promotional bundles.

9. Top 10 Cities by Orders

The dashboard identifies several cities with relatively high order volumes, including Imphal, Dhanbad, Kavali, Haridwar, Dibrugarh, Guntakal, Bidhanagar, North Dumdum, Bhagalpur, and Bilaspur. Imphal has the highest order count among the cities displayed.

Business Insight: Geographic demand can guide regional marketing, inventory allocation, delivery planning, customer acquisition, and logistics partnerships.

10. Interactive Dashboard Features

- **Delivery Date:** Analyze performance according to delivery periods.
- **Order Date:** Compare sales performance across different time periods.
- **Occasion:** Filter analysis by Anniversary, Birthday, Diwali, Holi, Raksha Bandhan, Valentine's Day, and other occasions.

These filters allow users to perform focused analysis without manually examining individual transactions. For example, management can isolate a particular occasion and immediately observe its revenue, product, timing, and geographical patterns.

11. Overall Business Findings

- Revenue is strongly influenced by occasion-based demand.
- Certain product categories contribute substantially more revenue than others.
- Customer purchasing activity is stronger during selected hours of the day.
- Monthly revenue is seasonal and varies considerably across the year.

- A small group of products represents important revenue opportunities.
- Certain cities show higher order volumes and can be prioritized for regional strategies.

12. Business Recommendations

- **Focus on high-performing occasions:** Create dedicated campaigns for Anniversary, Raksha Bandhan, Valentine's Day, Diwali, and other strong occasions.
- **Promote high-performing products:** Feature top revenue-generating products prominently across digital channels.
- **Use time-based marketing:** Schedule notifications and advertisements around peak ordering periods.
- **Improve seasonal inventory planning:** Use historical monthly patterns to prepare inventory before demand peaks.
- **Develop city-specific strategies:** Target high-order cities with localized promotions and optimized delivery support.
- **Increase average customer spend:** Use bundles, cross-selling, premium gift packages, and personalized recommendations.
- **Monitor delivery performance:** Track the 5.53-day average and investigate cities or periods with longer delivery times.

13. Project Outcome

The project successfully transforms raw sales data into an interactive management dashboard that provides both high-level KPIs and detailed business insights. Instead of manually reviewing individual transactions, decision-makers can quickly identify revenue drivers across products, occasions, time periods, customers, and locations. The resulting analysis supports data-driven decision-making in marketing, inventory management, product strategy, customer engagement, and logistics.

Overall Value: The dashboard provides a single, interactive view of sales performance and converts transaction-level data into actionable business intelligence.
